#2. Which manufacturer has the most models in this data set? Which model has the most variations?

*#a. Group the manufacturers and find the unique models. Show your codes and result.
Assuming 'df' is your data frame*

Get the frequency of each manufacturer

```
manufacturer_counts <- table(mpg$manufacturer)
```

Find the manufacturer with the most models

```
most_models_manufacturer <- as.character(names(manufacturer_counts)[which.max(manufacturer_counts)])
```

Get the frequency of each model

```
model_counts <- table(mpg$model)
```

Find the model with the most variations

```
most_variations_model <- as.character(names(model_counts)[which.max(model_counts)])
```

Print the results

```
print(paste("The manufacturer with the most models is:", most_models_manufacturer))
```

```
## [1] "The manufacturer with the most models is: dodge"
```

```
print(paste("The model with the most variations is:", most_variations_model))
```

```
## [1] "The model with the most variations is: caravan 2wd"
```

#b. Graph the result by using plot() and ggplot(). Write the codes and its result.

Count the number of unique models for each manufacturer

```
model_counts <- aggregate(mpg$model, by=list(mpg$manufacturer), FUN=length)
```

```

# Rename the columns for better readability
colnames(model_counts) <- c("Manufacturer", "Model_Count")

# Create a bar plot to visualize the data

#3. Same dataset will be used. You are going to show the relationship of the model and the manufacturer.

#a. What does `ggplot(mpg, aes(model, manufacturer)) + geom_point()` show?

```

library(ggplot2)
ggplot(mpg, aes(model, manufacturer)) + geom_point()

```

#b. For you, is it useful? If not, how could you modify the data to make it more informative?

#The plot shows the relationship between the model and the manufacturer. It can be useful to visualize
